Research and Program Evaluation in Illinois: The Extent and Nature of Drug and Violent Crime in Illinois' Counties

A Profile of the Jasper County Criminal and Juvenile Justice Systems

This project was supported by Grant # 02-DB-MU-0017, awarded to the Illinois Criminal Justice Information Authority by the Bureau of Justice Assistance, Office of Justice Programs, U.S. Department of Justice. The Assistant Attorney General, Office of Justice Programs, coordinates the activities of the following programs, offices and bureaus: Bureau of Justice Assistance, Bureau of Justice Statistics, National Institute of Justice, Office of Juvenile Justice and Delinquency Prevention, and the Office for Victims of Crime. Points of view or opinions contained within this document are those of the authors and do not necessarily represent the official position or policies of the U.S. Department of Justice.

FOREWORD

The Illinois Criminal Justice Information Authority is a state agency created in 1983 to promote community safety by providing public policymakers, criminal justice professionals and others with information, tools and technology needed to make effective decisions that improve the quality of criminal justice in Illinois. The Authority provides an objective system-wide forum for identifying critical problems in criminal justice, developing coordinated and cost-effective strategies, and implementing and evaluating solutions to those problems. The specific powers and duties of the Authority are delineated in the Illinois Criminal Justice Information Act (Illinois Compiled Statutes, Ch. 20, Sec. 393/7). Two of the Authority's many responsibilities are serving as a clearinghouse of information and research on criminal justice and undertaking research studies to improve the administration of criminal justice.

Since 1989, the Authority's Research and Analysis Unit has received funds under the federal Anti-Drug Abuse Act of 1988 to document the extent and nature of drug and violent crime in Illinois and the criminal justice system's response to these offenses. As a result of these efforts, the Authority has amassed a large amount of data measuring the extent and nature of drug and violent crime in Illinois and the impact these crimes have had on the criminal justice system. To put this information into the hands of Illinois' criminal justice policymakers in a useful summary format, the Authority's Research and Analysis Unit has developed profiles of the criminal justice system for each county in Illinois. In 1994, the Illinois Criminal Justice Information Authority produced a series of reports detailing criminal justice system activity levels for each of Illinois' 102 counties. As a result of the positive response by local criminal justice officials, in 1996 the Authority updated and expanded the scope of these reports to reflect current criminal and juvenile justice activity. It is hoped that these 2004 updated reports will be as valuable, if not more, than the original versions. In addition to providing policymakers with an overview of activities across the components of the justice system in their county (law enforcement, courts and corrections), the profiles also provide perspective by including trends experienced in counties with similar population sizes.

While the data presented in this report are by no means inclusive of all indicators, they do provide a general overview of crime and the criminal justice system's response. In addition, these data are readily available and consistently defined through existing statewide data collection mechanisms.

The information presented in this profile has been provided to the Authority by a number of state agencies, specifically: the Illinois State Police, the Administrative Office of the Illinois Courts, the Illinois Department of Corrections, and the Illinois Department of Children and Family Services. The support and cooperation of these agencies and their staffs have helped make this report an informative and timely source of information on the activities of the criminal justice system in Illinois.

I. Introduction

Jasper County, located in southeastern Illinois, covers an area of 494 square miles and had a 2003 population of 9,955, according to estimates by the U.S. Department of Commerce's Bureau of the Census. Using these figures, Jasper County was the 55th largest county in Illinois geographically, but 15th smallest in terms of population. Combining these two measures, Jasper County had the 6th lowest population density per square mile among Illinois' 102 counties.

As with the previous reports, information specific to Jasper County is presented in comparison with similar counties. To provide more useful comparisons, counties have been separated into four types; 1) Cook County, 2) Collar counties, 3) urban counties (outside of Cook and the Collar counties), and 4) rural counties. Because of its size, Cook County is compared to the rest of the state. The Collar counties are the five that border Cook County (DuPage, Lake, Kane, McHenry, and Will). Urban and rural counties are defined by whether or not they lay within a Metropolitan Statistical Area (MSA) (Appendix 1, page 24). Based on these definitions, there are 36 counties in Illinois that are part of a MSA (Cook, Collar, and urban counties) and 66 counties that are not part of a MSA (in other words, rural).

Recent changes to the standard definitions of MSAs have affected the classification of several Illinois counties. The United States Office of Management and Budget (OMB) defines metropolitan and micropolitan statistical areas according to published standards that are applied to Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on the application of 2000 standards to 2000 decennial census data and were announced by OMB on June 6, 2003.

Standard definitions of metropolitan areas have changed over time. The term "metropolitan area" (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). More recently, the term "core based statistical area" (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas.

The 2000 standards require that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a "central county" (counties). Additional "outlying counties" are included in the CBSA if they meet specified requirements regarding residents commuting to or from the central counties.

Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of: 1) the recognition of new areas as they reached the minimum required city or urbanized area population, and 2) the addition of counties to existing areas due to new decennial census data. In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data.

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For more information, contact the Population Distribution Branch at (301) 763-2419 (U. S. Census Bureau).

Based on these characteristics, Jasper County is one of Illinois' 66 rural counties. Throughout this report, the criminal justice activity trends experienced in Jasper County will be compared to those trends experienced in the other rural counties. This comparison will be realized through the calculation of rates for the activities being analyzed, with the number per 100,000 population the format for all the rates.

II. Law Enforcement Activities in Jasper County

One of the most commonly used indicators of the level of crime in a particular jurisdiction is the number of *Index offenses* reported to the police. There are eight separate offenses that constitute the Crime Index, including murder, criminal sexual assault, robbery, aggravated assault (violent Index offenses), burglary, theft, motor vehicle theft, and arson (property Index offenses). Although these eight offenses do not account for all crimes reported to the police, they are considered to be the most serious, frequent, pervasive, and consistently defined by different law enforcement agencies.

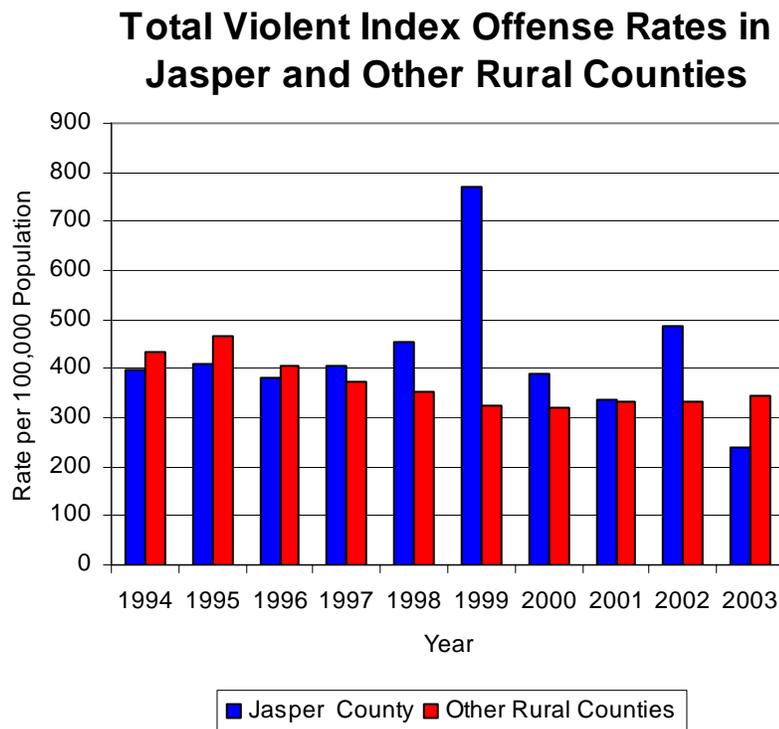

An indicator of the workload that law enforcement agencies place on other components of the justice system is the number of arrests made by police, including those for violent and property Index offenses and drug offenses. Unlike offenses, which are what police must respond to, arrests represent those offenders who may eventually be processed through other components of the justice system, including the courts, county jails, and state and local correctional programs.

Violent Index Offenses Reported to the Police in Jasper County

The number of violent Index offenses reported to the police decreased in Jasper County between 1994 and 2003, from 42 to 24, a 43 percent decrease. As in previous years and in most other counties, aggravated assault offenses accounted for the majority (83 percent) of violent Index offenses reported in Jasper County in 2003.

Between 1994 and 2003, the violent Index offense rate in Jasper County decreased 40 percent, from 399 to 241 offenses per 100,000 population (Figure 1). During that same period, the violent Index offense rate in the other rural counties decreased 20 percent, from 433 to 347 offenses per 100,000 population. The 2003 violent Index offense rate in Jasper County was 30 percent lower than the rate in the other rural counties.

Figure 1

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data

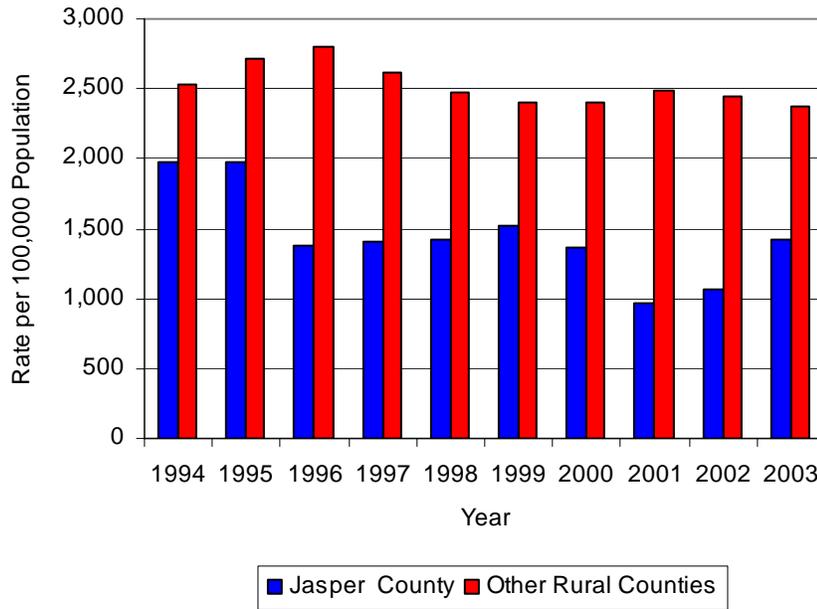

Property Index Offenses Reported to the Police in Jasper County

Between 1994 and 2003, the number of property Index offenses reported to the police in Jasper County decreased 32 percent, from 208 to 142. Thefts accounted for 65 percent of all property Index offenses reported in Jasper County during 2003.

Between 1994 and 2003, the property Index offense rate in Jasper County decreased 28 percent, from 1,976 to 1,426 (Figure 2). The property Index offense rate in the other rural counties decreased 6 percent, from 2,525 to 2,367 offenses per 100,000 population. Jasper County's 2003 property Index offense rate was 40 percent lower than the rate in the other rural counties.

Figure 2

Total Property Index Offense Rates in Jasper and Other Rural Counties

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data

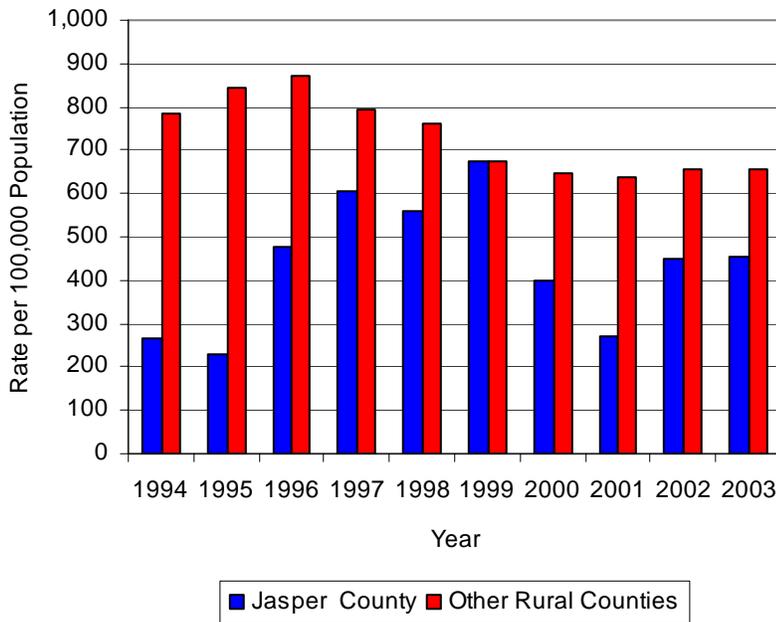

Index Arrests by Jasper County Law Enforcement Agencies

Between 1994 and 2003, arrests for total Index offenses by law enforcement agencies in Jasper County increased 61 percent, from 28 to 45. The majority of Index arrests were for property Index offenses. Of the 45 Index arrests made in Jasper County during 2003, 31 percent were for violent Index crimes and 69 percent were for property Index crimes. Arrests for theft and aggravated assault accounted for the majority of property and violent Index arrests in Jasper County during 2003. Thefts accounted for 61 percent of all property Index arrests, while aggravated assaults accounted for 100 percent of all violent Index arrests in Jasper County in 2003.

Between 1994 and 2003, the Index arrest rate in Jasper County increased 70 percent, from 266 to 452 arrests per 100,000 population (Figure 3). During the same period, the Index arrest rate in the other rural counties decreased 16 percent, from 786 to 658 arrests per 100,000 population. In 2003, Jasper County's Index arrest rate was 31 percent lower than the Index arrest rate in the other rural counties.

Figure 3

Index Arrest Rates in Jasper and Other Rural Counties

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data

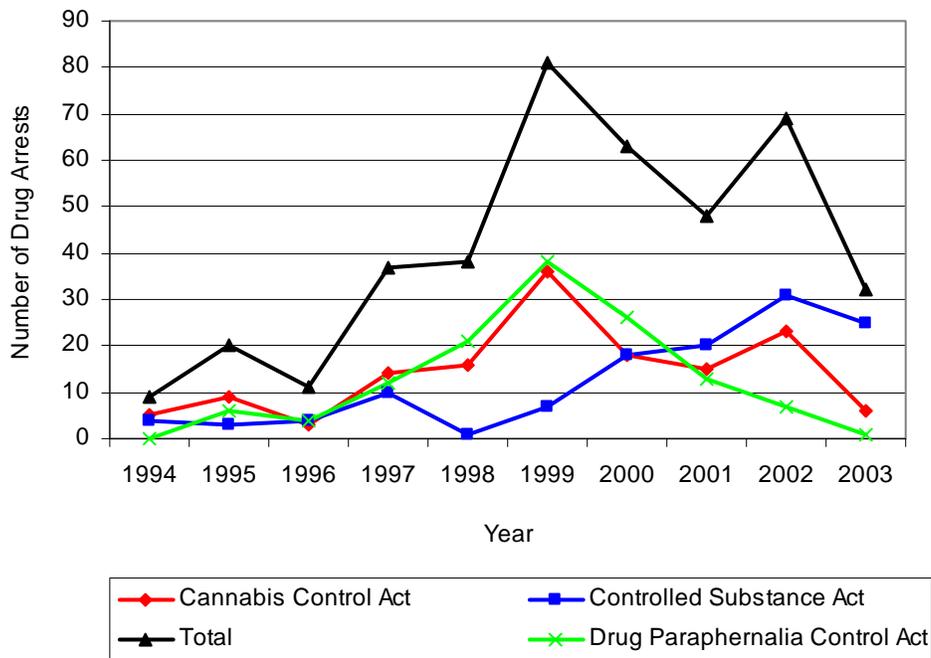

Drug Offense Arrests in Jasper County

Between 1994 and 2003, arrests for total drug offenses (including violations of Illinois' Cannabis Control Act, Controlled Substances Act, Drug Paraphernalia Control Act, and the Hypodermic Syringes and Needles Act) more than tripled in Jasper County, from nine to 32 (Figure 4). Similar to other counties, total drug arrests in Jasper County remained relatively stable between 1983 and 1994, before increasing annually nearly every year thereafter. Arrests for violations of Illinois' Controlled Substances Act accounted for a large portion of the increase in total drug arrests in Jasper County during the period analyzed.

During most of the period analyzed, arrests for violations of Illinois' Cannabis Control Act (which prohibits the possession, sale, and cultivation of cannabis) in Jasper County have outnumbered arrests for violations of the Controlled Substances Act (which prohibits the possession, sale, distribution, or manufacture of all other illegal drugs such as cocaine and opiates) except for the last three years. Between 1994 and 2003, the number of arrests for violations of the Cannabis Control Act in Jasper County have increased from five to six. Arrests for violations of the Controlled Substances Act increased dramatically, from four to 25 in Jasper County, during the same period (Figure 4).

Figure 4

Drug Arrests in Jasper County

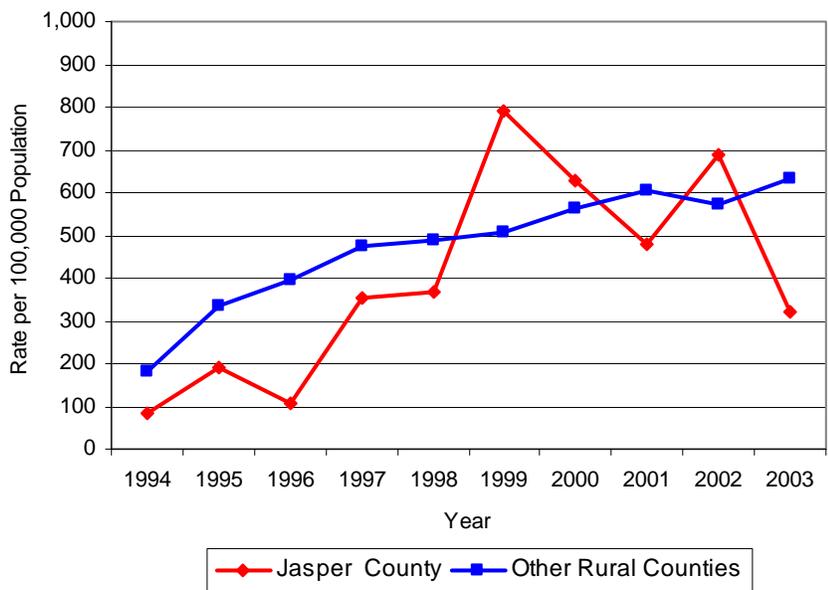

Source: Illinois State Police

Between 1994 and 2003, the arrest rate for all drug law violations in Jasper County also more than tripled, from 85 to 321 per 100,000 population (Figure 5). The total drug arrest rate in the other rural counties also more than tripled between 1994 and 2003, from 181 to 634 per 100,000 population. In 2003, the drug arrest rate in Jasper County was 49 percent lower than the rate in the other rural counties.

Figure 5

Drug Arrest Rates in Jasper and Other Rural Counties

Source: ICJIA calculation using Illinois State Police and U.S. Census Bureau data

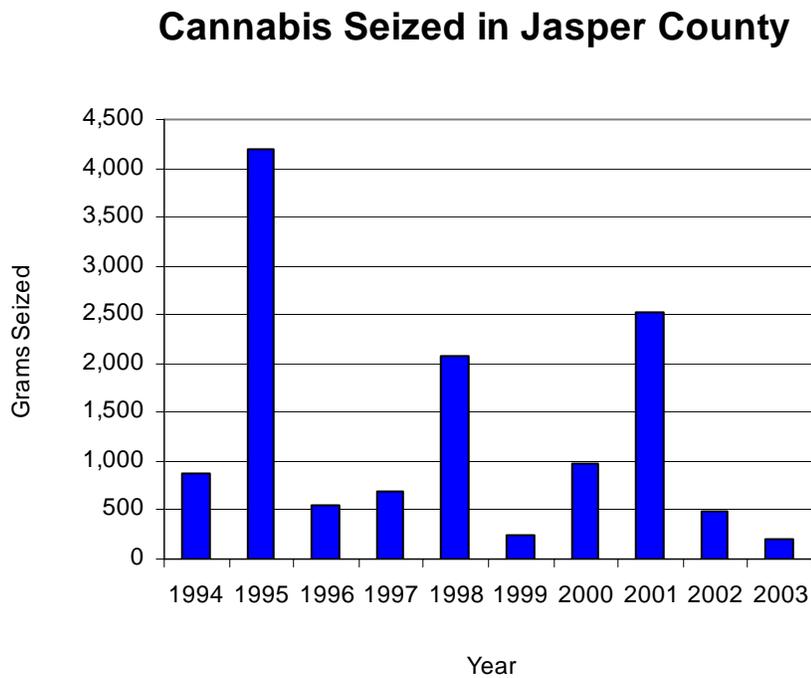

Drugs Seized in Jasper County

Drugs seized by law enforcement agencies are another indicator of the extent and nature of the illegal drug trade in a jurisdiction. When illegal drugs are seized by law enforcement agencies in Illinois, they are submitted to a crime lab for analysis. Most agencies submit drugs to one of the Illinois State Police crime labs. These labs record the quantity of drugs submitted from each county. This section discusses the quantities of illegal drugs seized and submitted to the Illinois State Police from law enforcement agencies in Jasper County.

Cannabis Seized in Jasper County

Cannabis accounts for the majority of drugs seized in Jasper County and in most Illinois jurisdictions. Although there were large variations in the number of grams of cannabis seized between 1994 and 2003, the quantity of cannabis seized in Jasper County decreased 76 percent, from 881 grams to 208 grams (Figure 6).

Figure 6

Source: Illinois State Police

During the period between 1994 and 2003, the quantity of cannabis seized in the other rural counties decreased 55 percent, from 607,267 grams to 272,435 grams. In 2003, Jasper County had a cannabis seizure rate of 2,087 grams per 100,000 population, 87 percent lower than the rate of 16,209 grams per 100,000 population in the other rural counties.

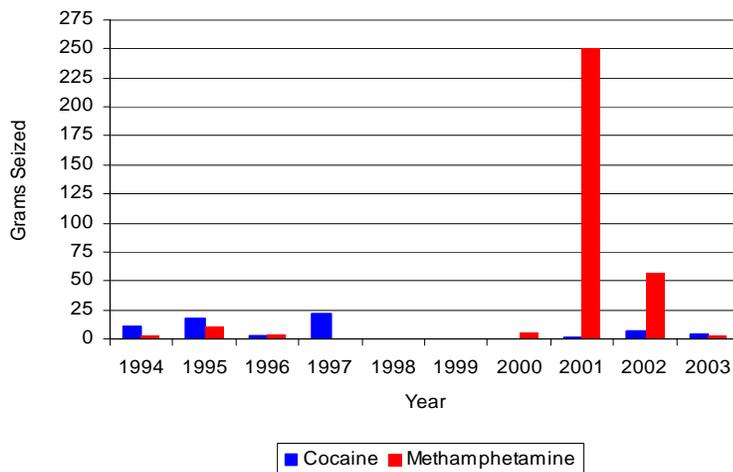

Cocaine and Methamphetamine Seized in Jasper County

During the past decade, it is clear that methamphetamine “activity” in the state has increased dramatically and has become a significant drug problem in many jurisdictions. Further, the extent to which law enforcement agencies are encountering methamphetamine has also dispersed across a large area of the state, with most of this being fueled by activities taking place in Illinois’ rural jurisdictions.

The quantity of cocaine and methamphetamine seized in Jasper County was limited between 1994 and 2003. The quantity of cocaine seized in Jasper County decreased from 11 grams in 1994 to four grams in 2003. Between 1994 and 2003 the quantity of methamphetamine seized remained stable at three grams, while reaching a period high of 251 grams seized in 2001 (Figure 7).

Figure 7

Cocaine* and Methamphetamine Seized in Jasper County

Source: Illinois State Police

*Cocaine totals include both powder and crack cocaine

The quantity of cocaine seized in the other rural counties decreased while the amount of methamphetamine seized increased dramatically during the period analyzed. Between 1994 and 2003, the amount of cocaine seized decreased 79 percent in the other rural counties, from 71,268 grams to 15,166 grams, while the quantity of methamphetamine seized increased from 2,616 grams to 13,214 grams. In 2003, 902 grams of cocaine per 100,000 population were seized in the other rural counties, compared to 39 grams of cocaine per 100,000 population in Jasper County. Comparatively, 786 grams of methamphetamine per 100,000 population were seized in the other rural counties, compared to 30 grams of methamphetamine seized per 100,000 population in Jasper County in 2003.

III. Adult and Juvenile Court Activity in Jasper County

Although Illinois has one of the best court reporting systems in the country, the Administrative Office of the Illinois Courts only collects information regarding the aggregate number of court filings, dispositions, and probation caseloads. Currently, there are no statewide data available on court filings, dispositions, and convictions by offense type. However, detailed offense data are available from the Illinois Department of Corrections for those convicted felons sentenced to prison.

Trends in the number of delinquency petitions filed and adjudicated in juvenile court are also presented. Illinois statutes define delinquency offenses as those committed by someone younger than 17 years old that would be considered crimes if committed by someone 17 years of age or older.

In Illinois, county probation departments are overseen by the Administrative Office of the Illinois Courts' Probation Division. This section also presents data on active misdemeanor and felony adult caseloads and the number of juveniles under the supervision of the probation departments in Jasper County and the other rural counties.

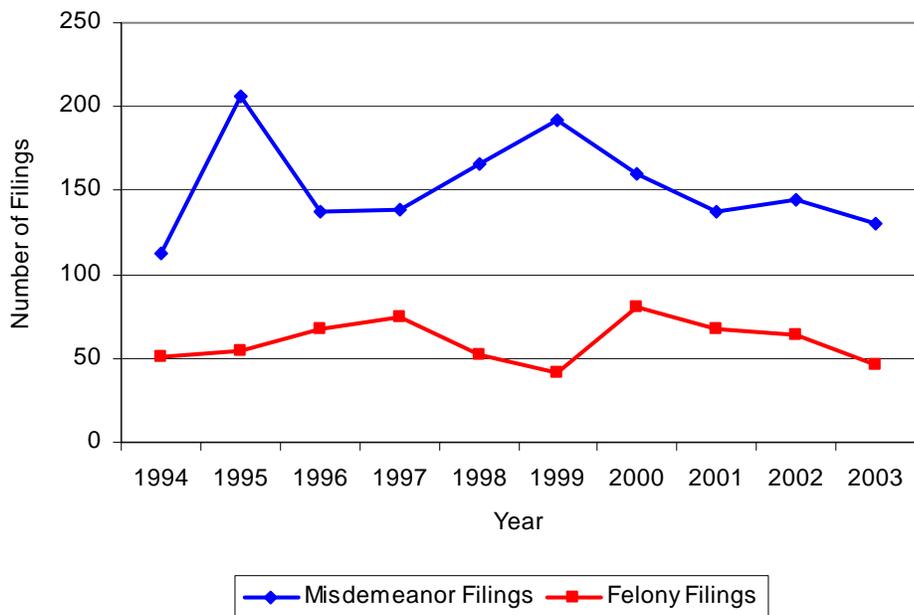

Misdemeanor and Felony Filings in Jasper County

The Administrative Office of the Illinois Courts reports data on criminal court cases in two categories: misdemeanors and felonies. After screening a case and deciding it warrants further action, the state's attorney must file formal charges in court. Misdemeanor cases are less serious than felonies and can be punished by a probation sentence of one year or less and less than one year of incarceration. Felony cases, on the other hand, are more serious and can be punished by a probation term up to four years and incarceration for more than one year. When comparing the number of filings across time and across counties, it should be noted that differences in reporting practices exist. For example, when two or more defendants are involved in a single case, some state's attorneys file a single case charging all defendants, while others file a separate case for each suspect.

In 2003, felony and misdemeanor court filings accounted for 20 percent of all filings in Jasper County's courts (civil, traffic, family, and other). Between 1994 and 2003, the number of felony filings in Jasper County decreased 10 percent, from 51 to 46 (Figure 8). During the same period, misdemeanor filings increased 15 percent, from 113 in 1994 to 130 in 2003. In 2003, misdemeanor filings out-numbered felony filings by nearly three to one.

Figure 8

**Felony and Misdemeanor Filings
in Jasper County**

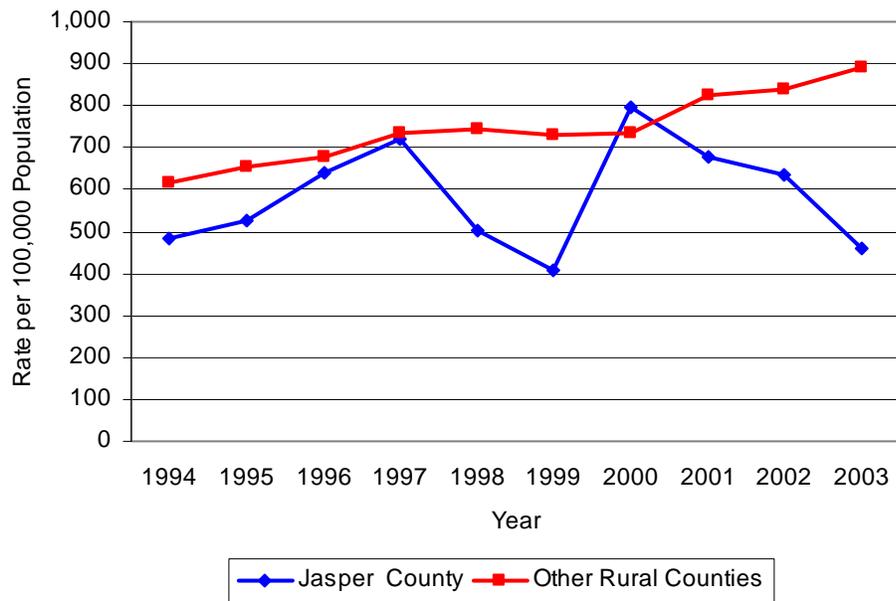

Source: Administrative Office of the Illinois Courts

Between 1994 and 2003, the felony-filing rate in Jasper County decreased 5 percent, from 484 to 462 cases per 100,000 population (Figure 9). The felony-filing rate in the other rural counties increased 45 percent during this period, from 615 to 892 cases per 100,000 population. In 2003, the felony-filing rate in Jasper County was 48 percent lower than the rate in the other rural counties.

Figure 9

Felony Filing Rates in Jasper and Other Rural Counties

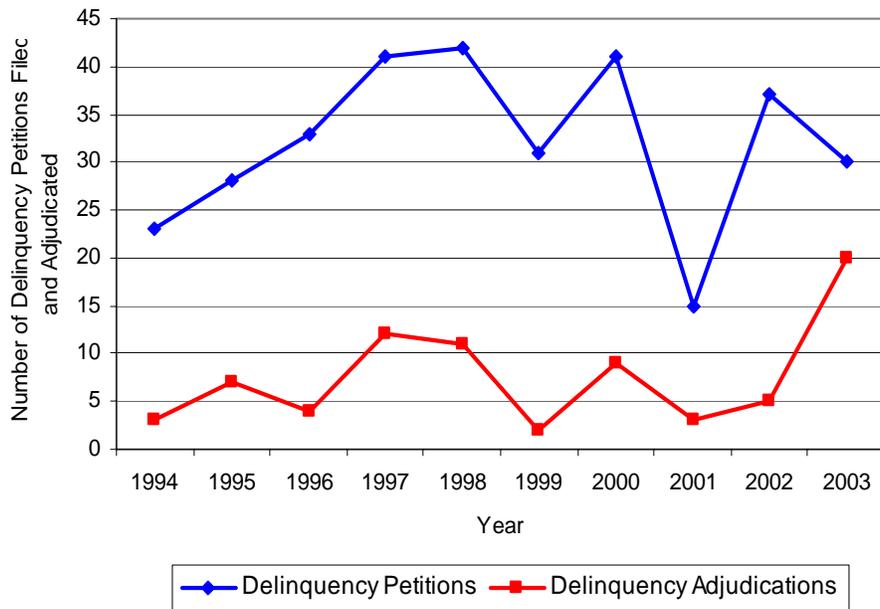

Source: Administrative Office of the Illinois Courts and U.S. Census Bureau data

Illinois’ juvenile court system differs in several key aspects from the adult criminal court system. One aspect revolves around the difference in treatment between juveniles and adults: the juvenile court process is somewhat less formal and adversarial; authorities are given much more latitude in determining the proper response to each case. Traditionally, the terminology used to describe juvenile proceedings has been less harsh than that used for the adult criminal process. For example, Illinois’ juvenile courts accept “petitions of delinquency” rather than misdemeanor or felony criminal complaints. However, pursuant to the Juvenile Court Reform Act of 1998, criminal court terms, such as “trial” and “sentencing,” have replaced the less harsh “adjudicatory hearing” and “dispositional hearing” terms.

Between 1994 and 2003, the number of juvenile delinquency petitions filed in Jasper County increased 30 percent, from 23 in 1994 to 30 in 2003 (Figure 10). In 2003, 67 percent of the juveniles named in delinquency petitions were adjudicated delinquent. Between 1994 and 2003, delinquency adjudications increased greatly, from three to 20. The majority of cases not resulting in an adjudication were continued under supervision.

Figure 10

Juvenile Delinquency Petitions Filed and Adjudicated in Jasper County

Source: Administrative Office of the Illinois Courts

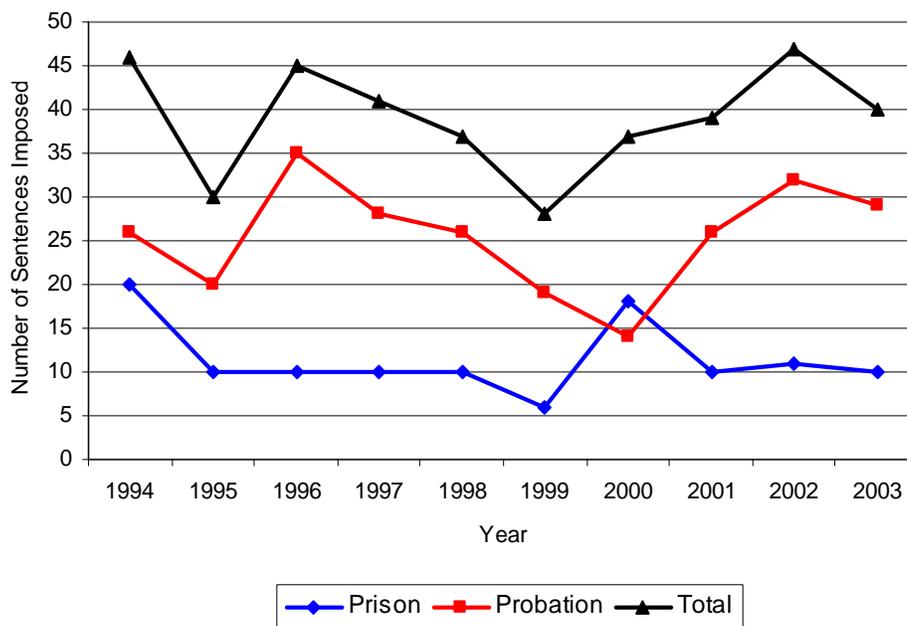

Between 1994 and 2003, the delinquency petition-filing rate in Jasper County increased 39 percent, from 1,833 to 2,547 per 100,000 juveniles. During the same period, the delinquency petition-filing rate in the other rural counties increased 12 percent, from 2,013 to 2,264 petitions per 100,000 juveniles. In 2003, the delinquency petition-filing rate in Jasper County was 12 percent higher than the rate in the other rural counties.

Anyone convicted of a felony in Illinois can be sentenced either to prison or probation, or receive a conditional discharge. A number of factors influence the type and length of sentence imposed on convicted felons, including the severity of the crime, the offender’s criminal and social history, safety of the community, and legislation affecting certain types of offenses. For some types of convictions a sentence to prison is required by state statute.

Between 1994 and 2003, the number of offenders convicted of a felony and sentenced in Jasper County decreased 13 percent, from 46 to 40 (Figure 11). The number of convicted felons sentenced to probation during this period increased slightly, from 26 to 29, while the number of felony prison sentences decreased from 20 in 1994 to ten in 2003. As a result, felony probation sentences increased as a proportion of total sentences, increasing from 57 percent in 1994 to 73 percent in 2003. Between 1994 and 2003, the proportion of felons sentenced to prison decreased, decreasing from 43 percent in 1994 to 25 percent in 2003. In 2003, 2 percent of convicted felons were sentenced to something other than prison or probation.

Figure 11

Sentences Imposed on Felons Convicted in Jasper County

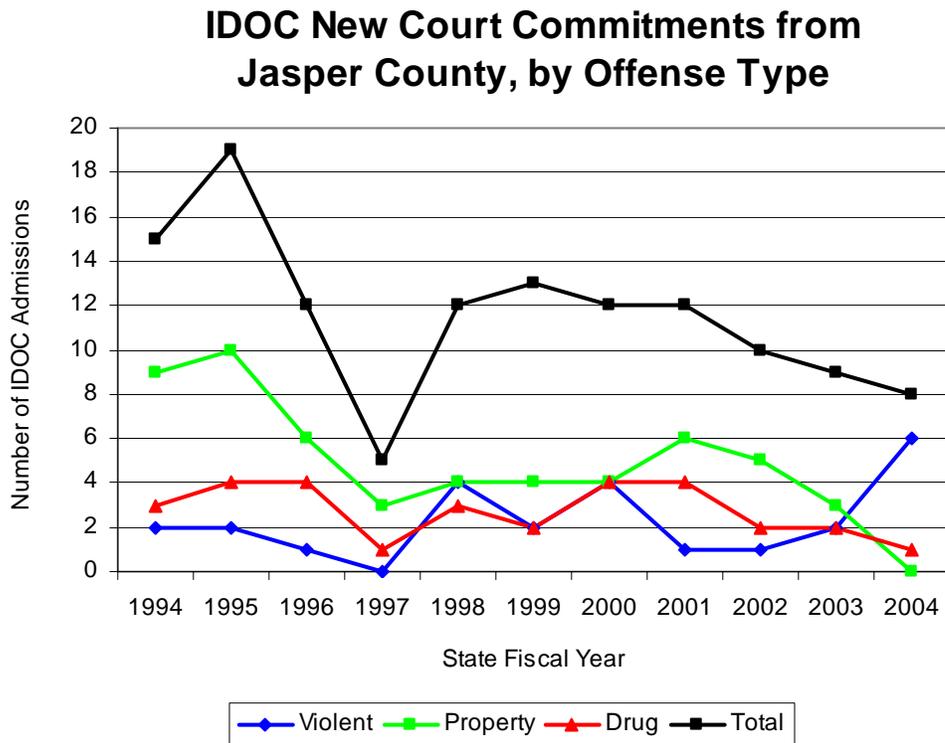

Source: Administrative Office of the Illinois Courts

Adult Prison Admissions from Jasper County

Between State Fiscal Years (SFYs) 1994 and 2004, the number of admissions to the Illinois Department of Corrections' Adult Division from Jasper County decreased 47 percent, from 15 to eight (Figure 12). During this period, the number of admissions decreased for property and drug offenses, while violent offender admissions increased from two in SFY 1994 to six in SFY 2004. The number of property offender admissions decreased from nine in SFY 1994 to zero in SFY 2004, while the number of drug offender admissions decreased from three to one.

Figure 12

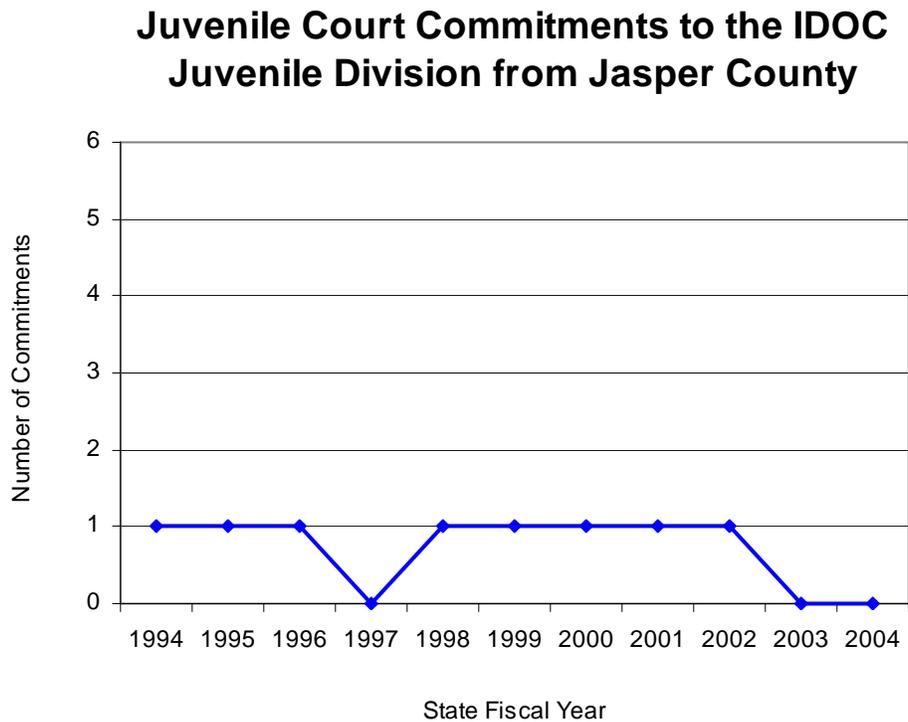

Source: Illinois Department of Corrections

In SFY 2004, violent offenders accounted for 75 percent of all admissions from Jasper County, compared to 13 percent in SFY 1994. The proportion of property offenders decreased from 60 percent in SFY 1994 to zero percent in SFY 2004. Between SFYs 1994 and 2004, drug offenders decreased from 20 percent to 13 percent of all admissions from Jasper County.

Juvenile Court Commitments to the Illinois Department of Corrections

The Illinois Department of Corrections' Juvenile Division provides long-term custody for youths, 13 to 17 years old, who have been found delinquent by the juvenile court and committed to the IDOC. Youths may remain in an IDOC juvenile facility until they are 21. The number of juveniles committed to the IDOC's Juvenile Division from Jasper County decreased from one to zero between SFYs 1994 and 2004 (Figure 13).

Figure 13

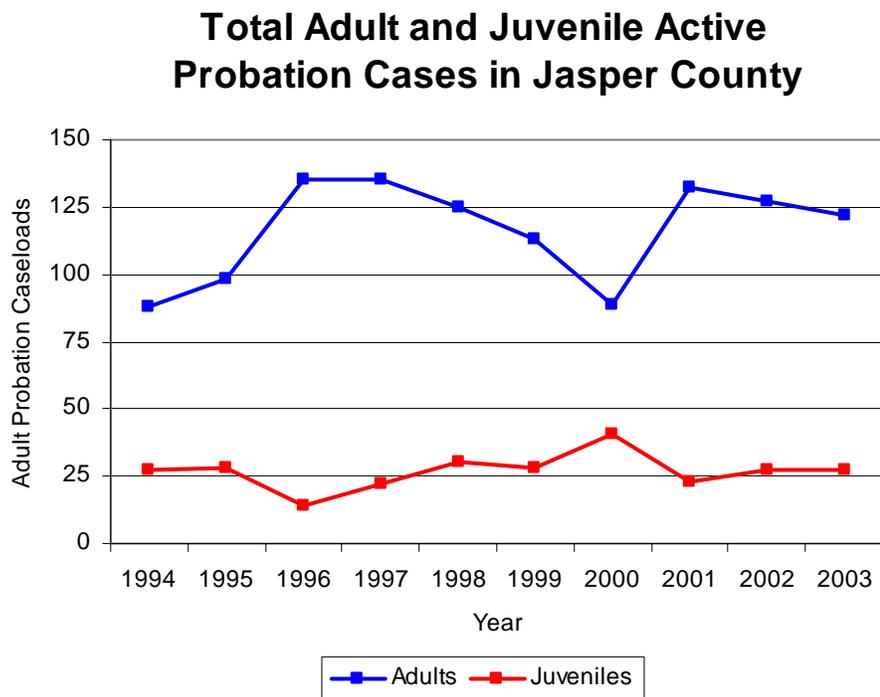

Source: Illinois Department of Corrections

In SFY 2004, the other rural counties had a rate of 231 commitments per 100,000 juveniles compared to Jasper County's rate of zero commitments per 100,000 juveniles.

Adult and Juvenile Probation Caseloads in Jasper County

Between December 31, 1994 and December 31, 2003, the number of active adult probation cases in Jasper County increased 39 percent, from 88 to 122 (Figure 14). In 2003, felony offenders accounted for 52 percent of Jasper County's active adult probation caseload. Between 1994 and 2003, the number of juveniles supervised by the Jasper County Juvenile Probation Department remained stable at 27 in both 1994 and 2003. By comparison, the number of active adult probation cases in the other rural counties also increased 39 percent between 1994 and 2003, while the juvenile probation caseloads remained stable.

Figure 14

Source: Administrative Office of the Illinois Courts

The active adult probation caseload rate per 100,000 population in Jasper County increased 47 percent between 1994 and 2003, from 836 to 1,226 cases per 100,000 population. During that same period, the active adult probation caseload rate increased 40 percent in the other rural counties, from 744 to 1,043 cases per 100,000 population. In 2003, the active adult probation caseload rate in Jasper County was 18 percent higher than the rate in the other rural counties.

IV. Jail Populations in Jasper County

Jail data in Illinois are collected by the Illinois Department of Corrections' Bureau of Inspections and Audits. As with court data, data are not available detailing the specific offenses for which offenders were held in county jails. In addition, between SFYs 1992 and 1994, the IDOC did not collect Illinois jail population data. Data presented for SFY 1994 were estimated by the Authority using the reported SFYs 1991 and 1995 data.

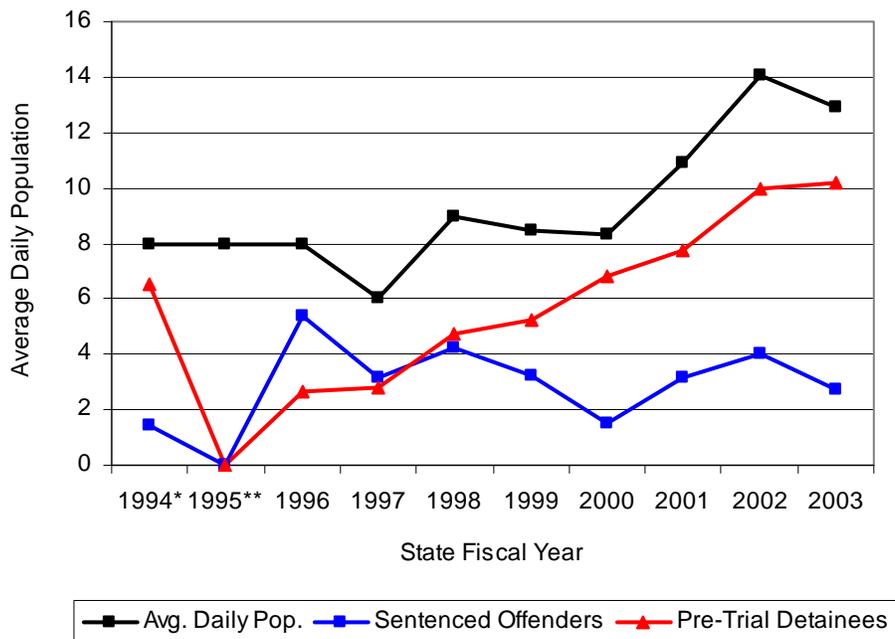

Average Daily Population of the Jasper County Jail

The Jasper County Jail was one of 91 county jails in operation in Illinois during State Fiscal Year 2003. There are 11 counties that did not operate a jail of their own; they rely on other counties to house their pretrial detainees and sentenced offenders at either a per-diem or contracted rate.

Between SFYs 1994 and 2003, the average daily population of the Jasper County Jail increased from eight to 13 inmates (Figure 15). During this period, pretrial detainees (those individuals who have been arrested for a crime and are awaiting trial) have accounted for a decreased percentage of the average daily population, decreasing from 82 percent in SFY 1994 to 79 percent in SFY 2003. Sentenced offenders (those offenders who have been convicted and sentenced to the county jail) accounted for an increased percentage, increasing from 18 percent in SFY 1994 to 21 percent in SFY 2003.

Figure 15

Average Daily Population of the Jasper County Jail

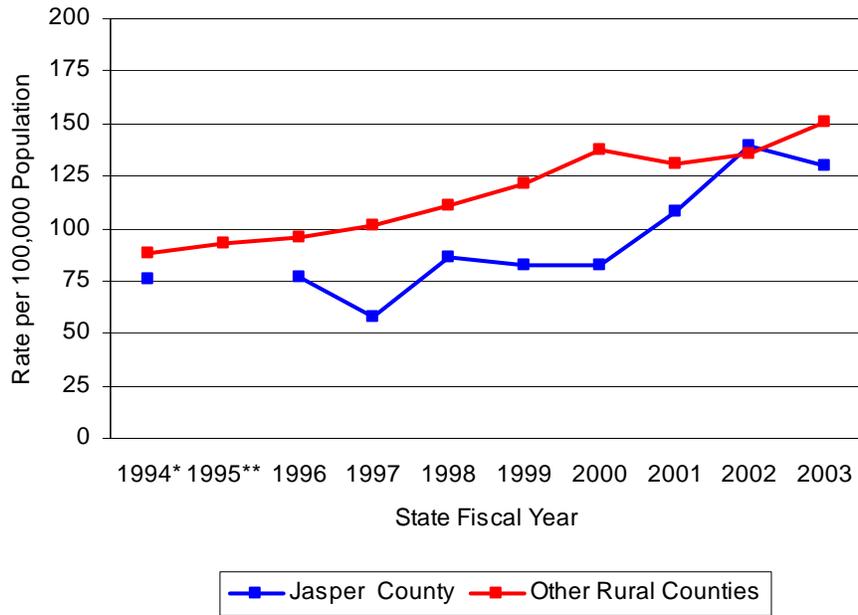

Source: Illinois Department of Corrections

* Information estimated by ICJIA
 ** 1995 data not available

Between State Fiscal Years 1994 and 2003, the average daily jail population rate in Jasper County increased 70 percent, from 76 to 130 per 100,000 population (Figure 16). During this same period, the average daily jail population rate in the other rural counties increased 71 percent, from 88 to 150 per 100,000 population. In SFY 2003, the Jasper County Jail had an average daily jail population rate 14 percent lower than the rate in the other rural counties.

V. Indicators of Child Abuse and Neglect in Jasper County

Substance-Exposed Infants in Jasper County

Illinois continues to experience the effects of prenatal substance abuse. In Illinois, if a baby is born and thought to have been exposed to illegal substances or alcohol, either through observation by physicians or toxicology tests, the case is reported to the Illinois Department of Children and Family Services (DCFS). These cases are then investigated by DCFS to verify the child's prenatal exposure to either alcohol or illegal substances. Between State Fiscal Years 1994 and 2004, 96 of Illinois' 102 counties reported at least one case of a substance-exposed infant.

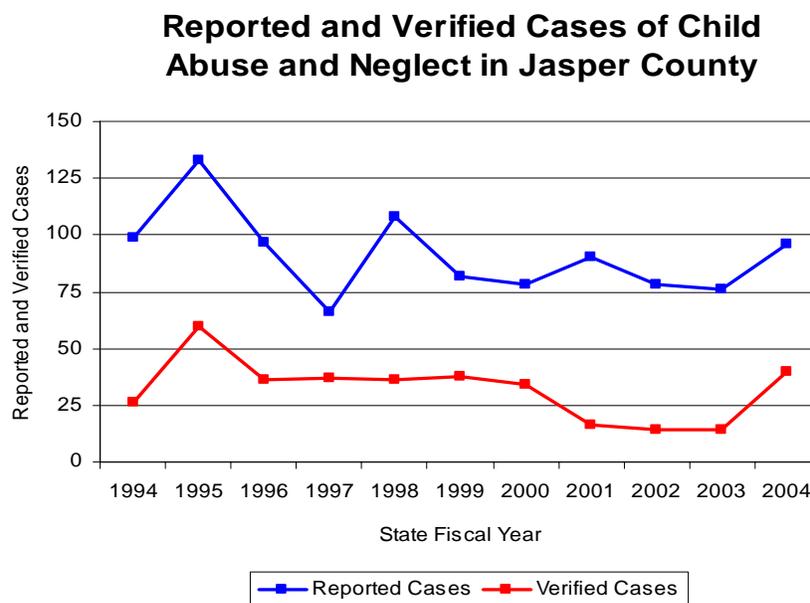

Between State Fiscal Years 1994 and 2004, there were no cases of a substance-exposed infant reported in Jasper County. The number of reported cases of substance-exposed infants in the other rural counties increased 23 percent, from 83 to 102, while the number of verified cases of substance-exposed infants increased 43 percent, from 44 to 63.

Child Abuse and Neglect Cases Reported and Verified in Jasper County

Recent research on the relationship between maltreatment of youth and delinquency has revealed an important distinction between child maltreatment and adolescent maltreatment. Using data from the Office of Juvenile Justice and Delinquency Prevention’s Program of Research on the Causes and Correlates of Delinquency, researchers have found that youth that were abused during childhood (12 years of age or less) were no more likely to become delinquent than youth who were not abused, but youth who were abused during adolescence (after age 12) were significantly more likely to be delinquent.¹ While prior child abuse may not be linked to juvenile delinquency, studies examining prior child abuse have shown that childhood victimization may be linked to other poor outcomes in youth, including low academic achievement, teenage parenthood (particularly for females), drug use, and symptoms of mental illness.² Additionally, research examining adolescent victimization (including physical and sexual assaults) and adult outcomes has found a correlation between previous victimization and substance abuse, depression, and post-traumatic stress disorder in adulthood.³ In Illinois, DCFS investigates reported cases of child abuse.

Between State Fiscal Years 1994 and 2004, the number of child abuse and neglect cases reported in Jasper County decreased slightly, from 99 to 96 (Figure 17). During that same period, 351 cases, or 35 percent of all cases reported, were verified by a DCFS investigation. Verified cases of child abuse and neglect in Jasper County increased 54 percent between SFYs 1994 and 2004, from 26 to 40.

Between State Fiscal Years 1994 and 2004, the rate of verified cases of child abuse and neglect in Jasper County increased 81 percent, from 846 to 1,527 per 100,000 juveniles (Figure 18). During the same period, the rate of verified child abuse and neglect cases decreased 15 percent in the other rural counties, from 1,917 to 1,636 per 100,000 juveniles. In SFY 2004, the rate of verified cases of child abuse and neglect in Jasper County was 7 percent lower than in the other rural counties.
