

Arrest data

In Illinois, an **arrest** refers to the taking into custody a youth who is believed to have committed a delinquent act (705 *ILCS* 405/5-401). Once a youth is arrested, a **juvenile police officer** may:

- Charge the youth with an offense and refer him or her to the state’s attorney’s office for prosecution or to probation for **intake screening**.
- Initiate a formal or informal **station adjustment**. With use of station adjustment, the youth’s case is not referred to the court for prosecution and the youth is released to a parent or guardian under specified conditions, such as obeying curfew, attending school, performing community service, and participating in social services. With an informal station adjustment, there is no admission of guilt by the minor. In a formal station adjustment, the youth admits to having been involved in the offense (705 *ILCS* 405/5-301).
- Release the youth without charging him or her.

Under the I-UCR program, all Illinois law enforcement agencies are required to report monthly offense and arrest data to the Illinois State Police. Since 1995 I-UCR program has only collected aggregate-level offense and arrest data from law enforcement agencies across the state. **Index offenses**, which include **property, violent, and drug crime index** offenses, in addition to supplemental data on domestic crimes, crimes against children, crimes against school personnel, and hate crimes. These aggregate totals combine offense data across gender, race, and age. Unfortunately, the collection of aggregate-level offense and arrest data prevents researchers from comparing offender characteristics by age and other important variables.

An alternate source for youth arrest data is Illinois’ central repository for criminal history record information, ISP’s Computerized Criminal History (CCH) system. The Criminal Identification Act (20 *ILCS* 2630/5) mandates that an arrest fingerprint card be submitted for all minors age 10 and over who have been arrested for an offense which would be a felony if committed by an adult, or one or both of two serious motor vehicle offenses—aggravated eluding of a police officer (625 *ILCS* 5/11-204.1), or driving under the influence (625 *ILCS* 5/11-501).

Fingerprint-based arrest cards for minors age 10 and over who have committed an offense that would be a class A or B misdemeanor if committed by an adult may be submitted to ISP, but are not required. Further, the Juvenile Justice Reform Provisions of 1998 mandated that ISP maintain a record of all station adjustments, both formal and informal, for offenses that would be a felony if committed by an adult. The reporting of station adjustments for misdemeanor offenses is optional.

The Authority, in cooperation with ISP, has established an in-house computer linkage to certain data elements of the CCH system’s back-up database for research purposes. The Authority has begun to assess the quality of the juvenile criminal history record information contained in CCH and its suitability for research purposes.

Preliminary analyses conducted on yearly datasets (1999-2001) extracted from CCH focused on compliance with the new youth arrest reporting requirements. As with adult criminal history

records kept in CCH, which are audited periodically by the Authority, various reporting issues affect the quality of juvenile CCH data. For example, changes in reporting requirements, coupled with the advent of electronic reporting technology, such as the Livescan fingerprint recording system, led to a 217 percent increase in the total statewide volume of youth arrests reported to ISP from 1999 to 2001.

In 1999, prior to the reporting requirement changes, close to 40 percent of the largest police departments in the state were not submitting youth arrest cards to ISP. By 2001, close to 90 percent of all police departments in the most populated areas were reporting youth arrests. However, even though the percentage of jurisdictions reporting had increased, the volume of arrests expected in a given area, when using Census Bureau population estimates to create a rough benchmark, was found to be adequate in only 22 counties. In other words, while the number of jurisdictions reporting increased, the number of arrests reported was not as high as expected. Because of these data issues, arrest trends between 1999 and 2001 cannot be reliably calculated using CCH data.

Further, as with any data reporting system, the CCH data will always be limited to those events it is designed to capture, namely, arrests documented by an arrest fingerprint card submitted to ISP. Although these issues are challenges to the research utility of CCH, the data provided by CCH can potentially fill a gap that exists in the I-UCR program, particularly as youth arrest reporting practices increase and become more standardized across the state. The Authority, through its direct computer linkage with CCH, continues to monitor progress in this regard.

An additional limitation of arrest data collected through CCH is the lack of ethnic and demographic categories. Demographic information is collected by race, including white, black, Asian, and American Indian, but data on ethnicity, such as Hispanic, is not collected. The omission of ethnicity is a result of nationally standardized electronic reporting to the FBI, which does not include ethnicity. As a result, the race categories used by CCH may not be comparable to race categories used by detention, corrections and other agencies that include ethnicity in their race codes.

Another challenge juvenile data collection and analysis is that the number of juvenile arrests in any given time period may change due to arrest record expungements.

In light of these data quality issues, the data on youth arrests and the characteristics of those arrested should not be viewed as an absolute measure of youth crime in Illinois.

Data summary

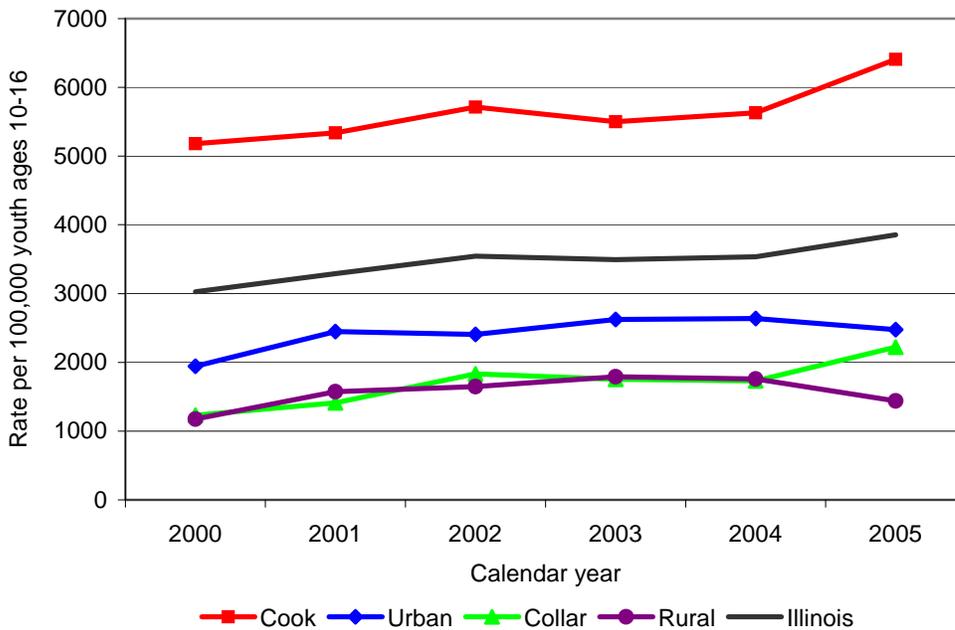

This research was conducted using arrest data collected in 2000 and later, when revisions to the Juvenile Court Act had been implemented and data reporting had improved with tighter requirements and use of electronic reporting technology.

From 2000 to 2005, overall youth arrests increased 30 percent, from 38,246 to 49,886. This count of arrests totals the number of fingerprint cards filed, rather than the unique number of youth arrested. Observed increases in youth arrests can be attributed in part to improved arrest data collection and entry rather than an increase in youth arrests or youth crime. Counties that

have a higher number of youth arrests may be counties in which local law enforcement agencies are fully complying with youth arrest reporting requirements or are also reporting misdemeanor arrests, which is encouraged, but not required.

In 2005, there were a total of 49,886 youth arrests in Illinois (*Figure 13*). Arrests for property offenses accounted for one-third of all youth arrests. Arrests for violent or person offenses accounted for 30 percent of all youth arrests and arrests for a drug offense accounted for 14 percent of all youth arrests. Arrests for weapons offenses accounted for 2 percent. Sex offenses accounted for 0.9 percent of all arrests. Offense categories—property, violent, drug, sex offenses—were created based on the Illinois Compiled Statutes.

Figure 13
Rate of reported arrests per 100,000 youth ages 10-16,
by county classification, 2000-2005

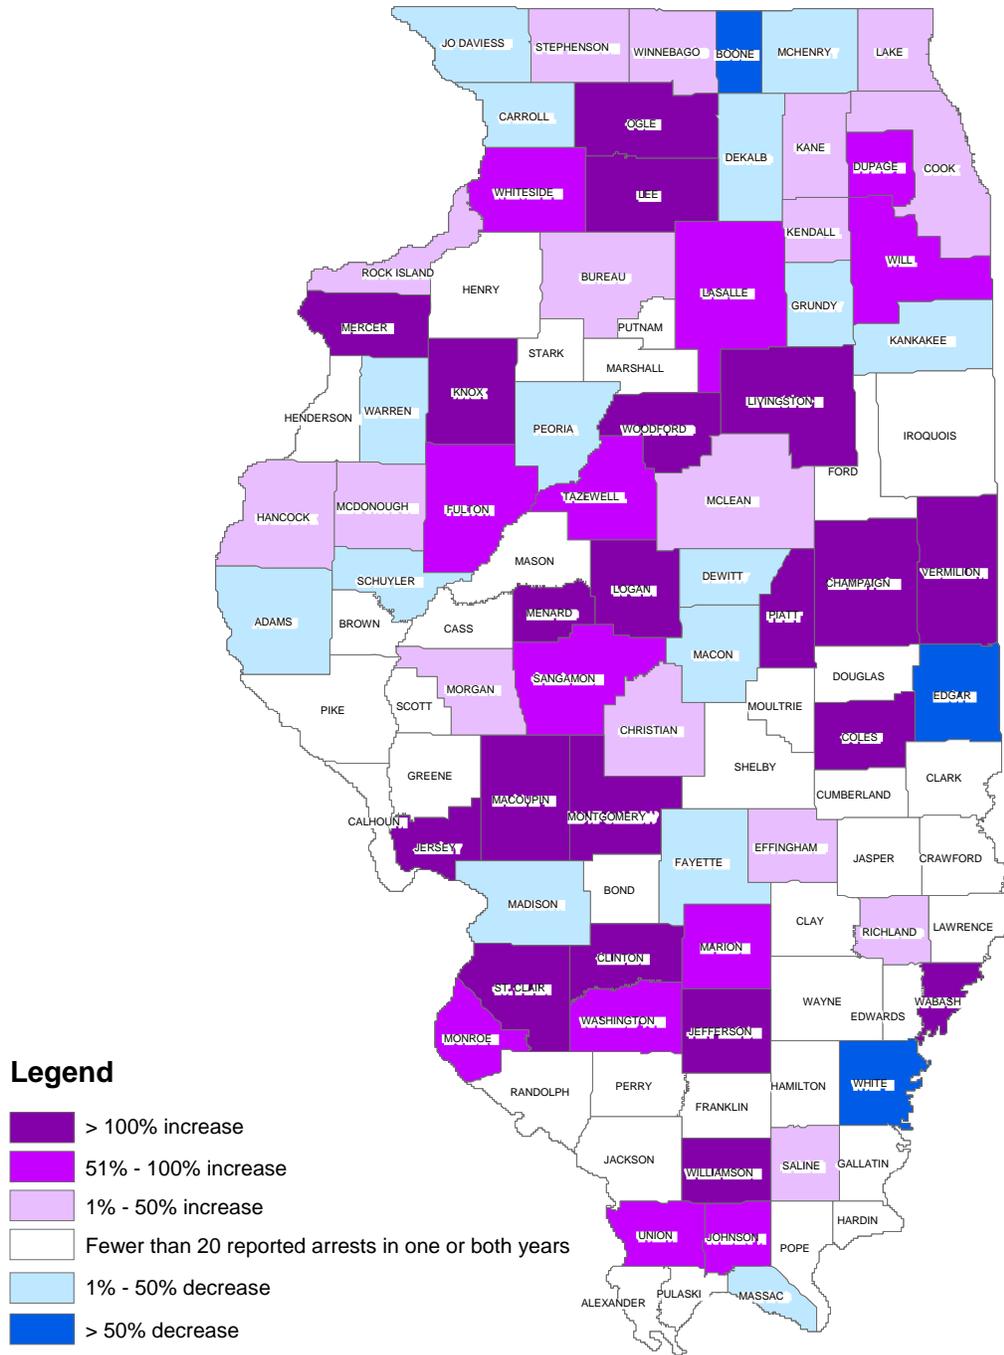

Source: Illinois State Police

Sixty-one percent of youth arrested in 2005 were identified as black and 38 percent were identified as white. Hispanic youth arrested in 2005 could appear in any race category, depending on their specific ethnic background and the reporting practices of local law enforcement. Most youth arrestees were 15 or 16 years old (29 percent and 37 percent respectively). Most arrestees are also male (79 percent).

Map 1 compares county rate changes in youth arrests from 2000 to 2005.

Appendix H: Data tables section

The following data tables include county-level detail for several dozen juvenile justice data elements. When available, some data elements were also broken down by demographics, such as age, race, and gender. Data is provided by calendar year, academic year, or Fiscal Year, depending upon the reporting agency. Whenever possible, both 2000 and 2005 data were included.

Many caveats have been mentioned throughout this report regarding the interpretation of the following data. The bullet points below describe additional issues that should be considered when reviewing the data tables.

- If there is a blank space where data should be, then data were not available.
- When zero (0) is listed for a particular data element, there are two interpretations
 - There were zero instances of that particular event occurring.
 - Zero instances of that particular event were reported.

For instance: A zero appears for Greene County in the youth arrests table. This could be interpreted as Greene County not having any youth arrests for 2005, or that Greene County did not report any youth arrests to the Illinois State Police, but actually did arrest juveniles.

Whenever possible, rates were calculated by using the population most appropriate to the data element. For example, youth incarceration rates were calculated using the youth population 13-16 since a youth under the age of 13 cannot be incarcerated in an Illinois Youth Center, and youth 17 or older are considered adults in Illinois.
